Genetic technologist registration numbers

- The numbers of Genetic Technologist joining the voluntary register continues to rise.
- The number of Genetic technologists registered has risen from 96 (July 2009) to 149 currently active (figures last updated October 2010)
- 53 new Genetic Technologists - this would indicate that approx. 86% of eligible GTs are now registered.

Genetic Technologist Professional body membership

- GT professional membership is also growing.
- Between December 2009 and June 2010 there were 31 new members (ACC data only, CMGS numbers not available).
- This would indicate that over 29.5% of Genetic technologist are now members of their professional bodies.

The new survey

- A new survey was undertaken.
- The survey should give us more accurate figures:
 - The numbers that are registered.
 - The numbers that are members of the professional bodies.
- This should help support our application to HPC or other registration/accreditation body.

Statutory regulation

- The VRC and the AGTC are currently working towards an application to HPC or other registration/accreditation body.
- Please encourage all Genetic Technologists to Join their professional body, and to register with the VRC.
